

## Severn Beach Line – Short Delay Data 28<sup>th</sup> February 2019

Our colleague, Andy Mac, has produced an interesting analysis of delays on arrivals at Severn Beach in February.

FOSBR monitor cancellations and delays over 5 minutes on an ongoing basis ([www.fosbr.org.uk/reliability](http://www.fosbr.org.uk/reliability)) and these have vastly improved since the Filton Bank four-tracking. However, Andy's statistics show that a large proportion of services arrive late, but 1-5 minutes late, so flying beneath our previous radar.

This is of interest as it indicates where GWR are struggling to stick to the given Severn Beach Line timetable. When the timetable moves towards a half-hourly service (theoretically 2021 but FOSBR are pushing for this to happen earlier), such delays can snowball to larger delays. We need to monitor this.
